

End of Life Announcement

Kofax Document Scan Server (DSS)

DSS Liquidation and End of Service Timing

Effective immediately, Kofax Document Scan Server is undergoing its formal End of Life (EOL). DSS will only be available until remaining inventory lasts or until January 1, 2009, whichever comes first. Kofax will not be manufacturing any additional units.

Customers are encouraged to contact their Kofax Sales Representative promptly if they are interested in acquiring any of the very limited number of DSS units still available.

Service support for DSS will continue until January 1, 2010. Kofax will no longer accept maintenance renewals past January 1, 2009. Only one-year renewal contracts will be available for sale or renewal between October 31, 2008 and January 1, 2009.

Document Exchange Server (DES) Migration Offer

Kofax is pleased to work with existing DSS customers interested in migrating their current solution to the new Kofax Document Exchange Server (DES).

DES 2.0 provides browser-based thin client scanning within the Kofax Document Exchange (KDE) Web Client of DES, and also supports scanning via DSS. Kofax will provide DSS customers with a DES 2.0 Concept Server license and a correlating number of KDE Web Client licenses equal to the number of DSS units purchased by the customer. For example, if a customer has 30 DSS units, they would receive a DES 2.0 Concept Server license with 30 KDE Web Client licenses.

Additional DES input and web client licenses can be purchased as well. Customers will be responsible for purchasing a maintenance contract for the DES configuration. The migration plan offer expires on January 1, 2010. Customers also will be responsible for any professional services required for implementation or customization of the system.

Customers are encouraged to contact their Kofax Representative for questions or additional information.
