

# Kofax Analytics for Capture

Kofax Analytics for Capture™ is an integrated analytics platform for Kofax Capture™ that is designed for any organization that needs meaningful control over document-centric business processes. Business users can customize more than 100 prebuilt reports and views without IT assistance. Near-real-time reporting and granular system data provide critical insight into opaque business processes, creating a central and definitive view into the effectiveness of an enterprise's systems engagement, employee productivity and the quality of information entering critical systems of record.

With Kofax Analytics for Capture, you can:

- ◆ Gain granular insight into all critical multichannel and advanced capture processes through nearly 100 pre-defined metrics and more than 100 records
- ◆ Filter the number of batches and documents by batch class or document type to identify any in-process bottlenecks — with a single click
- ◆ Objectively monitor human operators, business processes and software performance through powerful analytics
- ◆ Apply security settings based on user roles and contextual data rights to avoid exposing sensitive and confidential information
- ◆ Easily access and consolidate data on the fly from multiple Kofax Capture installations
- ◆ Interact with the web-based dashboards to build new reports or adjust database queries
- ◆ Leverage Kofax Insight™, included in Kofax Process Intelligence™, to extend the initial investment to additional data sources, departments and lines of business

*Integrated analytics platform for Kofax Capture*

## Gain Meaningful Control Over Your Operations

- ◆ Reveal per document, per field and per user accuracy and productivity rates when extracting document data
- ◆ Drill into reports to gain a definitive view into the cause and effect driving lower-than-expected accuracy, and make corrections without hesitation
- ◆ Learn how information flows through your operations and what the associated cost is to handle it from receipt through export
- ◆ Make accurate forecasts and estimates for how system improvements can potentially enhance overall system performance
- ◆ Apply role-based rights to specific data metrics to allow key decision-makers to access the right reports securely and within compliance rules
- ◆ Identify correlations between customer engagement outcomes and document processing activities
