**Engage Differently**

People want to engage differently with banks, insurance companies, government agencies and other organizations because digital technology has made better and new types of engagement possible. The proliferation of mobile devices, internet connectivity and social technology has changed expectations and behaviors of how we act, as customers and also as workers, managers, business partners or suppliers. To benefit from these new expectations and behaviors organizations in every industry are involved in a digital transformation, urgently adopting digital technology to enhance customer experience, streamline operations and exploit new business opportunities.

**Accelerate to a Positive Outcome**

Kofax TotalAgility® accelerates high-value business journeys to a positive result, journeys such as new customer onboarding, claim processing, loan automation, citizen service provision, supplier management, and more. TotalAgility orchestrates individual touchpoints in those journeys, for example the gathering or sending of documents or the digital signing of new contracts, and cuts latency between the touchpoints.

TotalAgility delivers more value at each human touchpoint and links traditional and digital channels. It intelligently automates touchpoints that previously required human intervention and can remove the need for analog and paper-based interactions entirely.

By accelerating high-value business journeys, TotalAgility increases customer satisfaction, improves operational efficiency and creates competitive advantage.

“Kofax TotalAgility breaks down the traditional walls. We’re now able to talk about a broad spectrum of offerings—with benefits such as accelerating new customer onboarding and improving collaboration throughout the entire lifecycle of a transaction. It elevates the value from just ‘cost savings’ to helping our clients also grow revenues. In short, TotalAgility is a game changer for us and our clients.”

Peter Ortiz
Technical Director, Capital Capture
TotalAgility Core Capabilities

TotalAgility delivers cognitive capture and process orchestration, applying artificial intelligence (AI) to unstructured content to streamline information-intensive processes by building greater efficiency, visibility and control into operations and reducing manual labor and potential for error. This results in reduced costs, improved cycle times and enhanced regulatory compliance.

Cognitive Capture helps organizations expand their digital workforce by leveraging AI to intelligently automate the acquisition, understanding and integration of unstructured content found in documents, emails, social streams and other sources. Ingest from any customer-preferred channel and leverage AI tools such as OCR, document classification, document separation, data extraction, natural language processing and machine learning to understand and learn captured content, making your digital workforce smarter over time.

Process Orchestration automates routine workflow and streamlines case management processes for better compliance, human decision-making, ad-hoc activity and process visibility.

Unified Intelligent Automation

TotalAgility provides pre-built integration to other capabilities of the Kofax intelligent automation platform, seamlessly orchestrating intelligent automation solutions that transform the capacity and performance of operations.

Process intelligence and system monitoring provide advanced and actionable analytics for any business process, helping businesses make informed, effective decisions sooner, and providing valuable insight to drive process optimization.

Mobile & omnichannel access engages customers, partners, suppliers and employees on any device at any stage of a business process, delivering rich experiences on mobile devices and supporting the broad spectrum of digital and physical channels businesses must support.

Robotic process automation empowers organizations to build a digital workforce that assists or completely offloads repetitive and data-intensive tasks from knowledge workers, freeing them to focus on more productive and value-added tasks. Robots can automate the extraction of web-based and internal system data needed in business processes, as well as the integration of this data into the downstream systems that need it.

Customer communication accelerates engagement by delivering low-latency, two-way, omnichannel customer communication that’s faster, more targeted and less expensive.

E-signature makes crucial agreements possible faster while allowing customers the flexibility to use any signature format they wish.

Deploy On-Premises or in the Cloud

TotalAgility provides a versatile, modern, open architecture and is specifically designed to give organizations the flexibility to deploy either on-premises or in the cloud with these deployment options:

Your premises – single tenant

Deploy and manage TotalAgility on your own premises to empower your employees, customers and suppliers to cognitively capture unstructured content, and automate and orchestrate the processes that use that content.

Your premises, or your cloud – multi-tenant

Install TotalAgility on-premises or in your preferred cloud, and service multiple tenants with a single TotalAgility installation. TotalAgility’s multi-tenanted architecture ensures each tenant’s data and application configuration stays completely isolated from other tenants on the same system. Efficiently provide cognitive capture services to multiple internal departments, or offer cognitive capture services to your customers.

The Kofax Cloud

Rely on Kofax to take care of the installation and configuration of the systems that support TotalAgility, by subscribing to the TotalAgility Cloud service running on Microsoft Azure. Get started developing your intelligent automation application immediately without the hassle of installing and configuring hardware and software. Achieve faster time to value, increased scalability and business agility, lower cost and reduced IT dependency.

A Kofax partner cloud

Leverage the expertise of regional Kofax partners offering cloud subscription services for cognitive capture and benefit from their local presence, specialized solutions and vertical industry focus.

Docker container

Simplify and accelerate deployment of your TotalAgility software and projects by creating and deploying a Docker container into any Docker-supported on-premises or cloud-based environment.
Off-the-shelf flexible integration
TotalAgility offers a variety of pre-built connectors, web services and synthetic API methods that allow customers to accelerate implementation of their solution and leverage and extend their existing software assets.

Design for Compliance and Agility
TotalAgility Designer is an easy-to-use visual environment that supports high productivity application development. It supports modeling, design, analysis, simulation and testing of high-quality customer engagement processes. Control and compliance goals can be met by designing processes to ensure enforcement of policy, procedure and regulation. Business agility goals can be met by enabling process flexibility at execution time, so key interactions can be orchestrated while processes are “in-flight.”

User Experience Drives Productivity and Improvement
The TotalAgility Workspace delivers the right work to the right person at the right time, enabling people to engage in process execution in a manner appropriate to their role. Process participants work efficiently, effectively, intelligently and transparently, and can participate in process improvement as they innovate daily with customers, partners and others.

Process Optimization
TotalAgility enables manual and automatic intervention in in-flight business processes, so they quickly adapt to changing circumstances. TotalAgility can react to events and changes in context, throughput, capacity and workload. As exceptions occur or case-by-case differences in requirement must be handled, TotalAgility can automatically respond with new processes and/or empower knowledge workers to intervene productively.
